

## RESOLUTION NO. 23-03

### A RESOLUTION OF THE SANTA MARIA VALLEY WATER CONSERVATION DISTRICT APPROVING THE ISSUANCE OF A REQUEST FOR PROPOSALS FOR THIRD PARTY OVERSIGHT OF DEBRIS AND SEDIMENT REMOVAL PROJECT AT TWITCHELL DAM AND RESERVOIR

#### RECITALS

**WHEREAS**, the Santa Maria Valley Water Conservation District (“District”) is organized and operates pursuant to California Water Code §§ 74000, *et. seq.*; and

**WHEREAS**, the District is responsible for operation and maintenance of Twitchell Dam and Reservoir, under contract with the United States of America, Department of the Interior, Bureau of Reclamation, in coordination and consultation with the United States Army Corps of Engineers, for the purpose of preventing flooding and recharging of water to the Santa Maria Valley Groundwater Basin; and

**WHEREAS**, significant sedimentation and debris deposits have occurred that can impede and have actually impeded the ability of Twitchell Dam’s outlet mechanisms to effectively release flows when necessary, thus interfering with the District’s flood control efforts; and

**WHEREAS**, significant sedimentation and debris deposits have occurred that can and have actually reduced the storage capacity of Twitchell Reservoir significantly, thus interfering with the District’s groundwater recharge efforts; and

**WHEREAS**, this sedimentation and debris situation commenced before, due to weather events and disasters—for example, following the storms of 1998, which brought fire-induced sediment loads into Twitchell Reservoir. At that time, under the general declaration of emergency by the County of Santa Barbara, the District cleared the sediment in the Cuyama River below the dam for a distance of approximately 2900 feet; and

**WHEREAS**, additionally, in summer and fall 2009 after wildfires, an unprecedented flow of sediment through the outlet works plugged the 16-foot diameter outlet tunnel for a distance of approximately 1,000 feet. To avert a disaster, the District hired excavators to work within the tunnel for nearly five months to clear it before the next rainy season; and

**WHEREAS**, recent weather events have created additional flow of sediment and debris, and diminished releases have had, and will have exacerbated future impacts: reduced water for downstream uses; reduced water conservation; significantly hampered flushing operations with attendant operational impediments to safe Dam

operations by obstruction of the outlet works; and most importantly, loss of flood protection for the Santa Maria Valley, increasing the risk of loss of life and property; and

**WHEREAS**, due to recent weather events, which have prompted the Governor of the State of California to issue and amend proclamations of States of Emergency that include the entire District and Twitchell Dam and Reservoir, sedimentation and debris deposits continue, with the added complication of high water elevations not recorded in well over a decade. This, in turn, increased risk to District operation and maintenance of the Dam and Reservoir, and interfered with the District's ability to carry out its obligations to appropriately release flows for flood control purposes, and to appropriately manage water storage for groundwater recharge purposes.; and

**WHEREAS**, on April 6, 2023, the Board of Directors for the District authorized issuance of a Request for Proposals for debris and sediment removal on a non-emergency basis. The RFP was issued on April 7, 2023, with an anticipated award date of May 11, 2023; and

**WHEREAS**, emergency reimbursement through the Federal Emergency Management Agency, and grant programs through federal and state agencies, require independent, third party oversight of operations/program management, field compliance monitoring, costs/invoicing, and grant administration; and

**WHEREAS**, the District now seeks to retain a qualified contractor to carry out the required grant assistance, project management, and field compliance monitoring, to maximize reimbursement from available programs, and to obtain grant funding to lower overall project costs related to the restoration and remediation project; and

**WHEREAS**, approval and release of the Request for Proposals is not a project under the California Environmental Quality Act ("CEQA"), per Section 15378 of the CEQA Guidelines.

**NOW THEREFORE, THE SANTA MARIA VALLEY WATER CONSERVATION DISTRICT HEREBY RESOLVES AS FOLLOWS:**

**RESOLUTION**

**Section 1.** The above recitals are found to be true and correct in all respects and are incorporated herein by this reference.

**Section 2.** The District wishes to solicit Requests for Proposals (RFPs) to retain a qualified contractor to carry out the required grant assistance, project management, and field compliance monitoring, to maximize reimbursement from available programs, and to obtain grant funding to lower overall project costs related to the restoration and remediation of Twitchell Dam and Reservoir.

**Section 3.** The District has prepared an RFP and attachments, which are attached hereto.

**Section 4.** Approval and release of the RFP is not a project under the California Environmental Quality Act (“CEQA”), per Section 15378 of the CEQA Guidelines.

**Section 5.** The Board President or his/her designee is authorized to issue and publish the RFP for in substantially similar form to the RFP and attachments attached hereto as Exhibit 1, which will remain open for over two weeks to ensure at least two bids/proposals are received before the closing time and date.

**Section 6.** If any section, subsection, paragraph, sentence, clause, or phrase of this resolution is declared unconstitutional or invalid for any reason, such decision shall not effect the validity of the remaining portions of this resolution.

**Section. 7.** This Resolution shall take effect immediately upon adoption.

PASSED at a regular open public meeting and in conformance with Brown Act by the Board of Directors of the Santa Maria Valley Water conservation District, State of California this 26<sup>th</sup> day of April, 2023.
